WIRELESSCONNECT™

***Across the country,
around the corner, or
down the hall, you never
have to miss a call.***

The office phone rings. It's your biggest client. She needs to speak with you right away, so you provide her with the information she needs in order to close the deal. She also needs to speak with the Marketing Director so you simply transfer her call to his 4-digit extension. What's unusual about this scenario is that you've done all this on your wireless phone on the way to a meeting. And the Marketing Director isn't at the office, he's on a retreat in Hawaii on his wireless phone. This advanced technology is here, it's now, and it's called WirelessConnect by Travelers Telecom.

WirelessConnect extends the reach of a call and the functionality of a PBX. Think of it as the simplicity of a residential cordless phone, with the features and technology of your state-of-the-art PBX system. This is a system that literally converts your wireless phone into a virtual extension of an office PBX. It's a system that mobilizes your work force without sacrificing communications or productivity. It's a system so technologically advanced, that only one company can do it seamlessly. Unlike other systems that require the costly and time-consuming creation of a special in-building network, WirelessConnect is the only system that quickly installs as an adjunct to your corporate PBX or Centrex system.

WirelessConnect turns a Wireless Phone into an extension of your PBX.

This revolutionary new system:

- Merges your existing wireless phone and your PBX
- Integrates seamlessly with most PBX and Centrex systems
- Allows you to remotely access land line calling rates
- Offers cascading or simultaneous ringing of wireless and desktop phones
- Provides abbreviated extension dialing to and from the wireless phone
- Provides corporate voice mail on your wireless phone
- Provides seamless, high quality communication inside or outside of your facility
- Delivers caller ID to and from your wireless phone
- Provides the most cost-effective, turn-key solution to your mobile work force

Enabling the mobile workplace.

One number, anywhere, anytime accessibility.

By dialing a single number, executives, managers and associates stay in touch with clients or each other, no matter how great the distance between them. And that means greater productivity, faster response to customers, and superior corporate communication.

The features you want

Abbreviated dialing, call waiting, three-way calling, single voice mail box, dial 9 for an outside line and caller ID.

The savings you want

WirelessConnect allows your remote workers to take advantage of your corporate land line long distance rates.

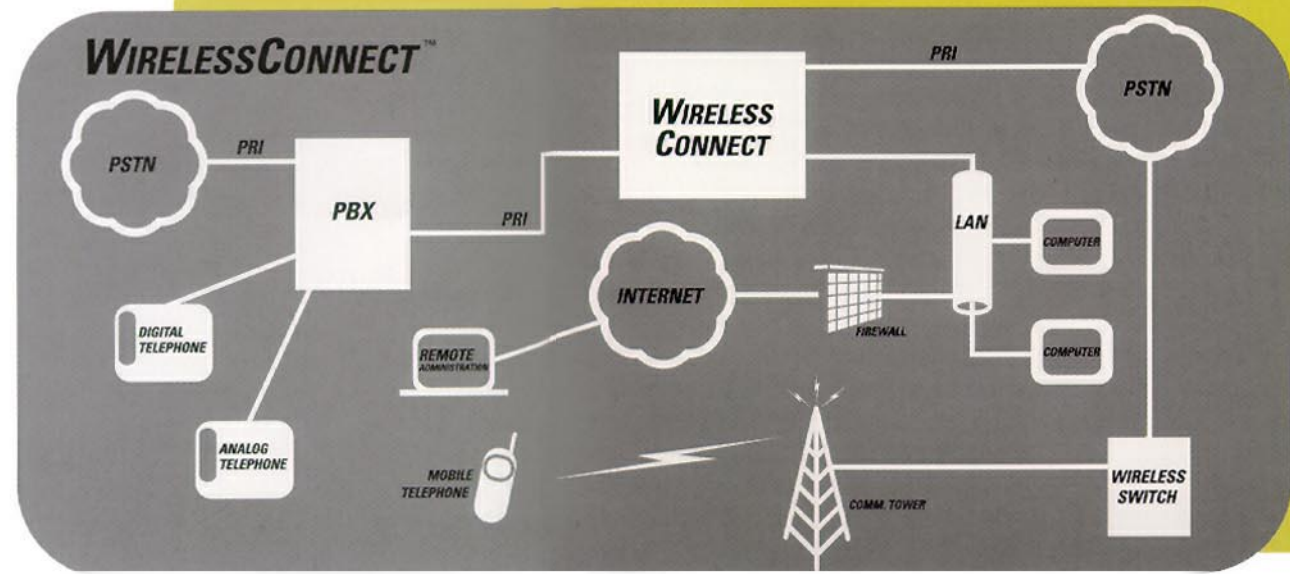

The service you want

Travelers Telecom, developers of the WirelessConnect System, provides toll-free nationwide technical support to ensure your satisfaction. Whether you need fault monitoring, diagnosis, or traffic management reporting, Travelers Telecom is here to help.

Simply, the most advanced system available.

WirelessConnect is a telecommunications platform that connects to a PBX or Centrex with a standard ISDN PRI T-1 trunk, to converge PBX extensions with remote phones. Incoming calls to the user's desk phone can be routed simultaneously to a wireless phone. Outbound calls on the wireless phone are converted to an extension of the corporate PBX. That means your wireless phone provides you with most of the features available on your office phone system, like abbreviated internal dialing, caller ID, and direct voice mail access.

All of this is achieved through one touch of a wireless phone. The call is connected to WirelessConnect, where it's authenticated and processed. WirelessConnect provides a dial tone, and full access to your PBX system. You make your wireless phone call as if you were sitting at your desk. It sounds simple because it is.

***We have a history
of making the right connections.***

Travelers Telecom, a privately held corporation since 1993, is a leading communications rental company for the hospitality industry. Our initial product, WirelessRoomConnect, featured in the nation's finest hotels, allows guests to access internal hotel extensions and receive calls from their room extension, utilizing their personal or rental wireless phone. WirelessConnect, our newest technological breakthrough has propelled us into a leadership position in the rapidly expanding telecommunications industry.
